Mini Project 3 – “Expense Tracker DB”Description:Design the backend for a Personal Expense Tracker App.Create users, transactions, and categories tables.Write SQL scripts for CRUD operations.Add a stored procedure for monthly summary generation.Trainer Deliverables:Students should submit .sql file with queries.Test queries via MySQL Workbench live.Pending

Tasks

1) **Create a MySQL table called playlists to store Spotify-style music playlists, with columns: playlist_id (primary key), user_id (foreign key), name (varchar), and created_at (datetime). Write the CREATE TABLE statement.**
2) **Insert three sample records into the playlists table: one for a user with a 'Workout Mix', one with a 'Chill Vibes', and one with a 'Top Hits' playlist. Use realistic data for each field.**
3) **Write an SQL UPDATE statement to rename the 'Chill Vibes' playlist to 'Evening Chill' for a specific user_id.**
4) **Write a DELETE statement to remove a playlist named 'Workout Mix' for a given user_id from the playlists table.

Hint: Make sure your WHERE clause targets only the intended row.**
5) **Create a stored procedure named GetMonthlyPlaylistCount that takes a user_id and a month (as an integer) as input, and returns the total number of playlists the user created in that month.

Hint: Use the MONTH() function in your WHERE clause.**

Query:

1) Create table

```sql
CREATE TABLE playlists (
    playlist_id INT PRIMARY KEY,
    user_id INT,
    name VARCHAR(255),
    created_at DATETIME,
    FOREIGN KEY (user_id) REFERENCES Users(user_id)
);
```

2) Insert data

```sql
INSERT INTO playlists (playlist_id, user_id, name, created_at)
VALUES
(1, 101, 'Workout Mix', '2026-09-02 08:30:00'),
(2, 102, 'Chill Vibes', '2026-09-01 19:15:00'),
(3, 103, 'Top Hits', '2026-08-30 21:45:00');
```

3) Update data

Run SQL query/queries on table hop.playlists:

```sql
UPDATE `playlists`
SET `name` = 'Evening Chill'
WHERE `name` = 'Chill Vibes'
  AND `user_id` = '102';
```

Run SQL query/queries on table hop.playlist

```sql
SELECT * FROM `playlists`
WHERE `user_id` = '102';
```

4) Delete

Run SQL query/queries on table hop.playlists:

```sql
DELETE FROM `playlists`
WHERE `name` = 'Workout Mix'
  AND `user_id` = '101';
```

5) Delimiter

```sql
DELIMITER //

CREATE PROCEDURE GetMonthlyPlaylistCount(
    IN p_user_id INT,
    IN p_month INT
)
BEGIN
    SELECT COUNT(*) AS total_playlists
    FROM `playlists`
    WHERE `user_id` = p_user_id
      AND MONTH(`created_at`) = p_month;
END //

DELIMITER ;
```

Run SQL query/queries on table hop.playlists:

```sql
CALL GetMonthlyPlaylistCount(102, 9);
```

Output:

Show all | Number of rows: 25 Filter rows: Search this table Sort
